DSE7450 DC Generator Control Module **R 4 999.00 Excl. VAT**

While stocks last! These are net special prices, and no other discounts are due.

- Designed to control DC generators in supplying both a load and/or the charging of batteries.
- Specific attention has been given to ensure this module has the necessary features to be configured for many different and challenging applications.
- Owing to the large number of monitoring points and the built in programmable logic controller, a wide number of operating modes can be realised. This provides the user with the ultimate flexibility in the engine control of the generator to ensure battery life optimisation, reduce engine maintenance/replacement and fuel usage.
- Provides information on battery temperature, charge remaining and depth of discharge.
- USB, RS232, RS485, Ethernet and Modbus RTU/TCP communications.
- Avoids the battery draining completely by starting the generator when the battery needs charging.
